William Marlette

Full Stack Developer

Brandon, FL | linkedin.com/in/willmarl | github.com/willmarl | willcat.dev

SUMMARY

Full stack developer. Learned NestJS and Next.js on my own after a bootcamp. Built and shipped a live HVAC site with booking, CRM, and Discord alerts, plus a NestJS/Next.js monorepo boilerplate. Can handle the whole stack including deploy (VPS, Docker, Nginx, Cloudflare). Been running Linux and a homelab for years.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, React Hook Form, Zod
Backend: NestJS, FastAPI, Prisma ORM, PostgreSQL, Redis, BullMQ, Node.js
DevOps & Tools: Docker, Linux, Nginx, Oracle Cloud VPS, AWS S3, Git, Vitest, Playwright

EXPERIENCE

Full Stack Developer & IT Consultant *NestJS, Next.js, TypeScript, PostgreSQL* – Aug 2025 – Present

Bonanza Breeze Inc

- Built and deployed a website and CRM for a small HVAC company. Still live in production
- Appointment booking with a real-time availability calendar. Stops double-booking at the transaction level
- Discord webhook pipeline through BullMQ so new appointments and quotes ping the team right away
- Only IT person on the job. Walked the client through domain, DNS, Zoho Mail, Resend, VPS, privacy policy, and ToS

PROJECTS

Monno *NestJS, Next.js, TypeScript, PostgreSQL* – 2025 – Present

NestJS + Next.js monorepo boilerplate. Reusable base for production apps

- Auth built from scratch. 2-token system, Google/GitHub OAuth, session geolocation, risk scoring for new-location and new-device logins
- Wrote Playwright E2E tests for critical paths. Day to day I ship a feature then check it works before deploy
- CLI that writes prompts for adding CRUD resources so AI tools don't go off the rails as much

GitHub | Live Demo

Invare *NestJS, Next.js, TypeScript, PostgreSQL* – Apr 2026 – Present

Hardware inventory tracker for electronics hobbyists. Components, code snippets, wiki pages

- Syncs hardware components from a public GitHub repo on startup. Admins can re-sync. Retired units stay so old inventory links don't break
- Fork/clone system. Each unit keeps its official source slug and parent fork ID
- Wiki serves markdown docs and official unit pages on the same slug routes

Live Site

EDUCATION

Full Stack Web Development Certificate in Web Development | TripleTen Bootcamp | 2024 – 2025
Google IT Support Professional Certificate in IT Support | Google / Coursera | 2026
CompTIA A+ Certification in IT Support | CompTIA | Jul 2026
